750kV reactor – power transmission and distribution

About Multi-Group

MULTI-GROUP is a Southern Africa-based infrastructure solutions provider operating across Eswatini, Mozambique, and the broader SADC region. With a strong track record in rail, industrial, and technology sectors, MULTI-GROUP delivers high-quality, reliable, and locally supported solutions to governments, utilities, and private sector clients.

Through a strategic partnership with a globally recognised, world-class power equipment manufacturer and EPC contractor with proven delivery across more than 90 countries, MULTI-GROUP brings international-grade electrical infrastructure solutions to African markets — with full local presence, execution capability, and after-sales support.

Our Manufacturing Partner

Our OEM partner is one of the world's top transformer manufacturers and a leading global EPC contractor. Products are manufactured to IEC, GB, and DL international standards and have been deployed in ultra-high voltage national grids, large-scale renewable energy projects, nuclear power plants, rail infrastructure, and mining operations across more than 90 countries. Annual transformer manufacturing capacity exceeds 400 million kVA, the highest market share of any manufacturer globally.

Why Choose Multi-Group?

Local Presence & Support

- Offices in Eswatini and Mozambique
- Established relationships in rail & infrastructure sectors
- Rapid mobilisation and on-site support
- Local procurement and logistics capability

Global Manufacturing Excellence

- World-class OEM with 400M+ kVA annual transformer capacity
- IEC/GB/DL-compliant equipment meeting international standards
- Proven performance in 90+ countries worldwide
- Competitive pricing versus European OEMs

Full EPC Capability

- End-to-end project delivery from concept to commissioning
- Survey, design, engineering & construction
- Testing, commissioning, and formal handover
- Ongoing operations & maintenance support

Complete Breadth of Solutions

- Low voltage to Ultra-High Voltage (1100kV)
- Solar PV & Wind power integration
- Substations, transformers, cables & switchgear
- Smart, digital, and modular systems

SECTION 1 — PRIMARY FOCUS

Substation Solutions

Multi-Group delivers complete substation solutions from initial concept through to commissioning and long-term maintenance. Our OEM partner has designed, supplied, and commissioned substation infrastructure across more than 30 countries.

Turnkey Substations (HV / MV / LV)

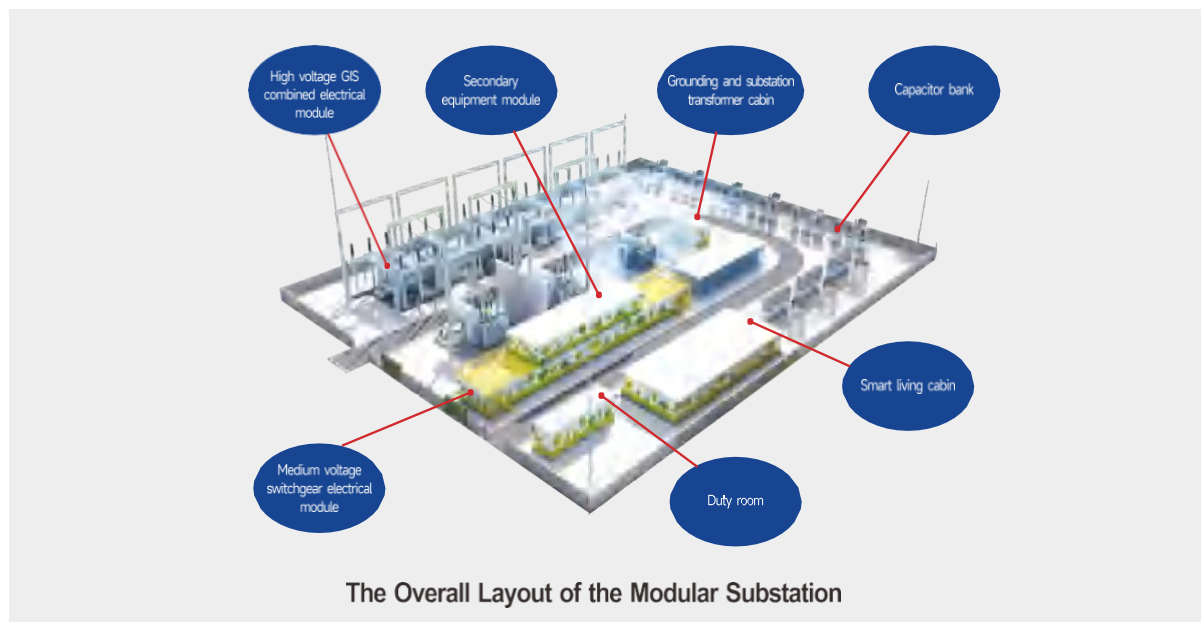

Complete turnkey packages covering all voltage levels, from low voltage distribution networks to high-voltage transmission substations. Each delivery includes full engineering, civil works, equipment supply, erection, testing, and commissioning.

Voltage Ranges Available

- Low Voltage (LV): up to 1kV
- Medium Voltage (MV): 1kV – 35kV
- High Voltage (HV): 35kV – 220kV
- Extra-High Voltage (EHV): 220kV – 800kV
- Ultra-High Voltage (UHV): 800kV – 1100kV

Scope of Supply

- Power & distribution transformers
- High & medium voltage switchgear
- Protection & control systems
- Cables, cable accessories & busbars
- Civil, structural & earthing works

Mobile Substations

Pre-engineered, factory-assembled substations mounted on road-transportable platforms. Ideal for rapid deployment in emergency situations, temporary industrial operations, new mine or park developments, and disaster recovery scenarios.

Key Features

- Rapid deployment — operational within days
- Integrates all primary and secondary equipment
- High reliability and low maintenance requirements
- Available vehicle-mounted or containerised

Typical Applications

- Mining operations start-up power supply
- Emergency & disaster relief power
- Load transfer during permanent substation maintenance
- Temporary power for events & construction sites

Digital & Smart Substations

Next-generation intelligent substations built to IEC 61850 standards, enabling automated protection, metering, real-time monitoring, and remote control. Three-layer network architecture supports full digitisation of all substation functions.

Digital Features

- IEC 61850-compliant automation architecture
- Digitalisation of all substation functions
- Interconnected communications platforms
- Real-time SCADA integration

Operational Benefits

- Reduced maintenance cost and on-site personnel
- Predictive maintenance through data analytics
- Improved reliability and faster fault response
- Remote monitoring and control capability

Application Sectors

Ports & Terminals

Shore power, cranes, terminal utilities

Rail Infrastructure

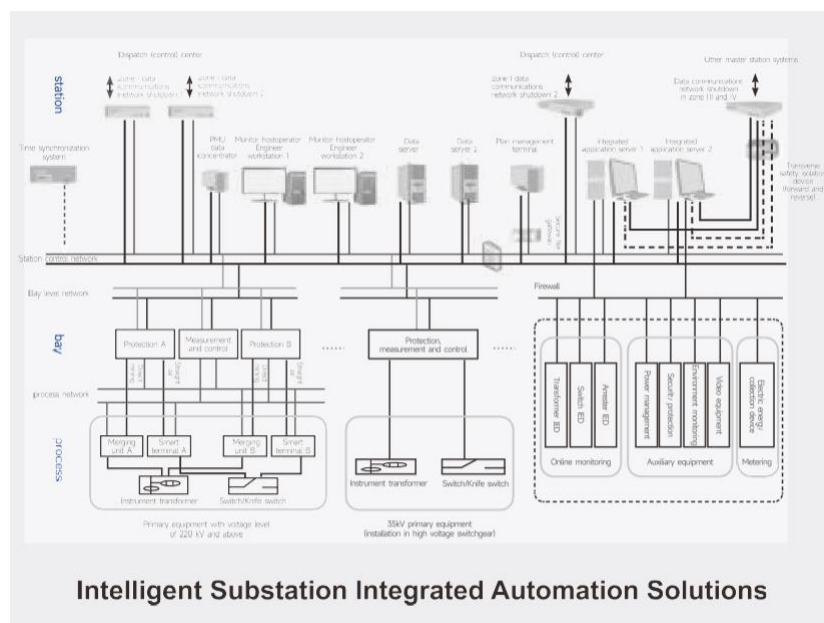

Traction substations, depot power, signalling

Utilities & Grid

Transmission & distribution network expansion

Industrial Plants

Mining, oil & gas, petrochemical, data centres

SECTION 2

Transformer Solutions

Our transformer portfolio spans the complete range from distribution units to the world's most advanced ultra-high voltage converter transformers, all manufactured to IEC/GB/DL international standards.

33%

UHV DC Market Share

37%

UHV AC Market Share

53%

Large Hydro Market Share

51%

Nuclear Power Market Share

49%

Offshore Wind Market Share

52%

Pumped Hydro Market Share

Power Transformers

Ratings Available

- UHV: up to 1100kV
- EHV: 500kV – 800kV
- HV: 110kV – 330kV
- MV: up to 35kV
- 400M+ kVA annual manufacturing capacity

Applications

- National transmission grid infrastructure
- Hydropower & thermal power plant step-up
- Nuclear power station transformers
- Offshore and onshore wind farm step-up
- Pumped hydro storage station transformers

Distribution Transformers

Configurations

- Oil-immersed distribution transformers
- Dry-type transformers (indoor & outdoor)
- Pre-assembled pad-mounted units
- Low-loss stack core series (S13-M-250)

Key Benefits

- Low losses and energy-saving design
- Suitable for hot, humid, and sandy climates
- Compact design for urban/industrial networks
- Meets IEC and African grid specifications

Special & Converter Transformers

Rail Traction Transformers

- High overload and short-circuit resistance
- Small installation footprint, low noise
- High-speed and metro rail applications
- Suitable for harsh and polluted environments

Converter & Furnace Transformers

- HVDC converter station applications
- Polysilicon reduction furnace types
- Wind and solar power converter applications
- Independently developed, patented designs

Instrument Transformers

Current transformers (oil-immersed, SF6 gas-insulated), voltage transformers (electromagnetic, capacitive), and combined transformers. Deployed in utility and industrial applications across more than 50 countries.

Current Transformers

- Oil-immersed current transformers
- SF6 gas-insulated types
- Ratings up to 500kV and above
- Widely used by state utilities and power groups

Voltage Transformers

- Electromagnetic voltage transformers
- Capacitive voltage transformers (CVT)
- VPU combined transformer series
- U-shaped open core designs for cost efficiency

SECTION 3

Wires & Cable Solutions

A comprehensive range of power cables, accessories, and conductors suitable for ultra-high voltage transmission through to low voltage distribution. World-leading manufacturing and testing capability for cables rated at 750kV and 1100kV UHV AC/DC.

HV & UHV Cables

- 66kV – 500kV whole-series HV cables
- HV & UHV cable accessories (up to 500kV)

Overhead Transmission Conductors

- Large-section heat-resistant aluminium alloy busbars
- UHV-rated high-capacity aluminium conductors

- XLPE cross-linked polyethylene insulated cables
- Underground and submarine cable solutions

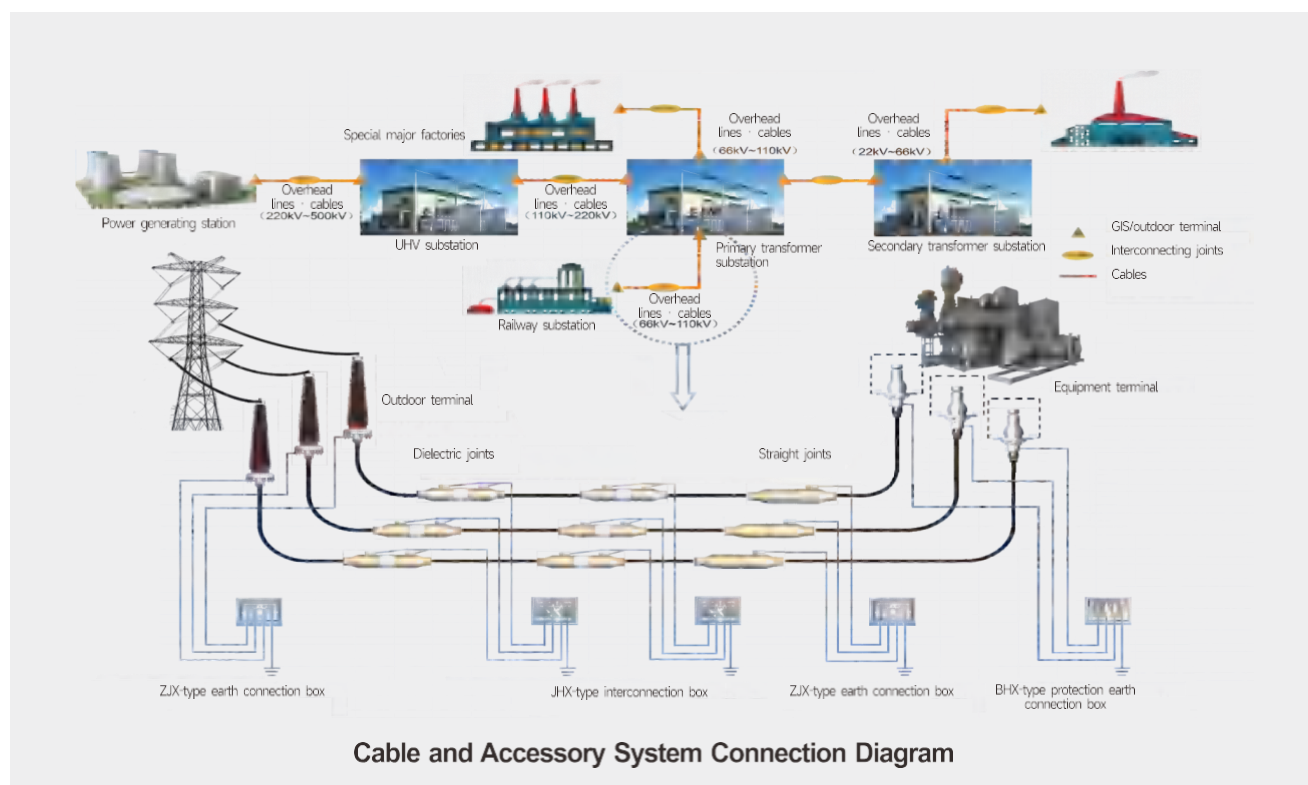

Special Cables

- Rail transit cables (metro and mainline)
- Oil field special cables
- Industrial and civil wiring solutions
- Pre-fabricated branch cable systems

- Cables + accessories + construction packages
- Market share >45% for 500kV integrated packages

Cable Accessories & System Integration

- Outdoor terminals and dielectric joints
- Straight joints and interconnection boxes
- Earth connection and protection systems
- Full integrated Cable & Accessory System packages

SECTION 4

Switchgear & Protection Equipment

High-Voltage Switchgear

Gas-insulated switchgear (GIS) and air-insulated switchgear (AIS) covering the full voltage spectrum. All products meet IEC/GB/DL standards and demonstrate top-tier operating performance across domestic and international projects.

GIS Products

- 126kV, 145kV, 252kV, 550kV GIS switchgear
- 800kV SF6 tank-type circuit breakers
- 252kV and 363kV GIS for grid expansion
- 72.5kV inflatable cabinets for offshore wind

AIS & Circuit Breakers

- 145kV ceramic cylinder vacuum circuit breakers
- 550kV and 800kV tank generator circuit breakers
- 40.5kV, 126kV, 252kV isolating switches
- Proven IEC/GB/DL standard compliance

Medium & Low-Voltage Assemblies

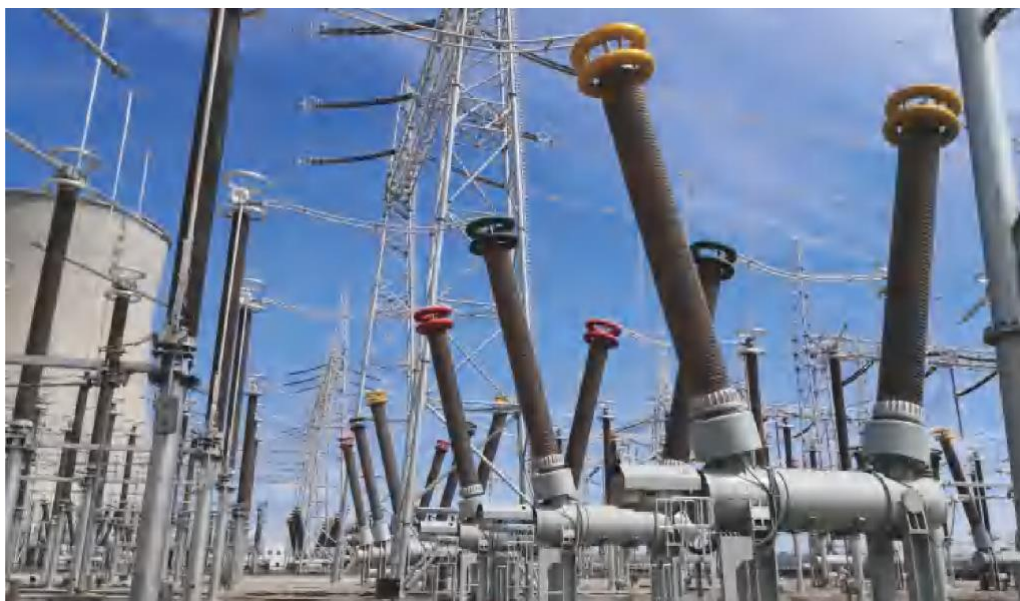

Complete range of MV and LV distribution network products for power grid construction, distribution grid upgrade, and industrial and renewable energy applications. Exported to multiple African countries including DR Congo, Uganda, Bangladesh, Malaysia, and Vietnam.

MV Products

- Ring main units (RMU) / inflatable cabinets
- Pole-mounted switchgear
- Medium voltage flexible interconnects
- Primary supporting products for distribution

LV Products

- Sub-section post and low voltage assemblies
- Intelligent instruments and meters
- Integrated primary and secondary distribution solutions
- Smart metering and energy management

800kV SF6 tank-type circuit breaker

SECTION 5

Renewable Energy Solutions

Multi-Group delivers complete renewable energy systems for solar PV and wind power, from small off-grid installations to utility-scale grid-connected power plants. Our OEM partner leads the global solar PV EPC market by total installed capacity, with over 5,000 projects across more than 20 countries.

30GW+

Global Installed Solar & Wind Capacity

5,000+

Solar & Wind Projects Completed

30+

 CO₂ Emissions Reduced (Million Tonnes)

Solar PV Systems

System Types

- Utility-scale grid-connected PV power stations
- Commercial and industrial rooftop solar
- Agricultural solar (agrivoltaics & fishery integration)
- Off-grid and hybrid solar systems

EPC Capabilities

- Power station design and feasibility studies
- Equipment supply and procurement management
- Civil, structural, and electrical construction
- Testing, commissioning, and grid connection

Inverter Range

- String inverters: 8kW – 9,000kW rated capacity
- High PV/inverter ratio for maximum generation
- Grid-friendly 1500V DC input, high efficiency
- Intelligent O&M via cloud monitoring platform

O&M Cloud Platform

- Real-time data from all plant equipment
- Cloud-based intelligent analytics and reporting
- Power generation improvement of up to 2%
- Revenue increase of up to 3% through optimisation

500MW solar PV Power Station

Wind Power Systems

Onshore Wind Solutions

- Wind farm EPC from feasibility to commissioning
- 35kV and 66kV nacelle and tower transformers
- Wind farm collection substations
- Full lifecycle O&M support

Offshore Wind Expertise

- VSC-HVDC flexible DC offshore converter stations
- 220kV – 500kV offshore step-up transformers
- 72.5kV inflatable & hybrid GIS for offshore platforms
- Environmentally friendly vegetable oil transformers

675MW Wind Power and Storage Plant

Grid Integration & Flexible DC Transmission

Flexible DC (VSC-HVDC)

- VSC-HVDC for long-distance renewable transmission
- 800kV VSC-HVDC converter valves
- Offshore wind flexible DC collection systems
- Low-loss onshore renewable transmission solutions

Hybrid & Storage Systems

- Solar + wind + storage hybrid power stations
- Energy storage integration with grid support
- Distributed grid automation and smart control
- Active regulation and reactive power compensation

Solar-Powered Irrigation for African Agriculture

Our OEM partner has successfully delivered solar-powered irrigation projects in partnership with international development organisations, directly improving agricultural livelihoods for farmers and herdsman in remote areas. These proven solutions are directly applicable to similar agricultural communities across southern and eastern Africa.

SECTION 6

EPC & Turnkey Project Services

Multi-Group provides full Engineering, Procurement, and Construction (EPC) services for power infrastructure projects across Africa. We deliver complete power infrastructure from concept to commercial operation, backed by a global EPC partner ranked in the ENR Top 250 International Contractors.

EPC Scope • Feasibility studies and power planning • Engineering design and project management • Equipment procurement and logistics • Civil, structural, and electrical construction	Project Types • Transmission and distribution substations • Solar PV and wind power generation plants • High-voltage overhead transmission lines • Industrial and mining power infrastructure
Commissioning & Handover • Factory acceptance testing (FAT) • Site installation and system integration • Pre-commissioning and commissioning • Performance testing and formal handover	Awards & Recognition • Multiple Luban Prize recipients (highest Chinese overseas construction award) • Mongolia Energy Construction Quality Engineering Award • 2019 China Power Quality Project Award • Grade A Engineering Design Certificate in Power Industry

SECTION 7

Industrial Power Systems

Tailored power solutions for demanding industrial environments. Multi-Group combines global OEM expertise with local engineering knowledge to design, supply, and commission robust power systems across the full range of industrial sectors.

Mining Power Systems

- MV/HV mining substations (surface and underground)
- High overload capacity transformer designs
- Mine winder and hoist transformer solutions
- Intelligent mine power monitoring systems

Oil & Gas Power Systems

- Oil field fully-sealed maintenance-free transformers
- Polysilicon reduction furnace transformers
- Petrochemical plant power distribution
- Safe, energy-saving, pollution-resistant designs

Port & Terminal Electrification

- Shore-to-ship power systems
- Crane and container handling power infrastructure
- Port distribution substations
- Smart metering and energy management

Rail Yard & Depot Electrification

- Traction substations (DC and AC systems)
- Depot auxiliary power and distribution
- High-speed rail and metro power solutions
- 330kV AT power supply traction transformers

SECTION 8

Secondary Power Equipment & Protection

Integrated protection, automation, and control systems for substations, new energy power stations, and distributed grid networks. All systems are built to IEC 61850 standards and are designed for full interoperability with existing SCADA and grid management platforms.

Intelligent Substation Automation

- Three-layer IEC 61850 network architecture
- Protection, measurement, control, and metering
- Advanced auto-regulation and online analysis
- Fully digital, low-carbon, integrated design

Smart Distribution Automation

- Distributed power system automation
- Real-time and quasi-real-time monitoring
- Fault protection, control and grid scheduling

New Energy Station Systems

- Two-tier two-network architecture for renewables
- Solar, wind, and biomass energy integration
- Active regulation and reactive power compensation
- Power prediction and grid stability support

New Generation Condensers

- Dynamic reactive power support for grid stability
- Integration with high renewable-penetration grids

- Lean standardised grid management platform

- Key equipment for large-scale new energy development
- Real-time monitoring and intelligent control

SECTION 9

Maintenance & Lifecycle Support

Multi-Group provides comprehensive maintenance and lifecycle management services for all power equipment supplied. Our intelligent O&M platform enables proactive asset management, minimising downtime and maximising equipment life.

Preventative Maintenance

- Scheduled maintenance programmes
- Thermal imaging and insulation testing
- Oil sampling and dissolved gas analysis (DGA)
- Periodic system evaluation and health index reporting

Upgrades & Retrofits

- Control system modernisation to IEC 61850
- Protection relay upgrades
- Transformer life extension programmes
- Switchgear refurbishment and re-gasification

Emergency Response

- 24/7 emergency response capability
- Rapid spare parts mobilisation
- On-site fault diagnosis and repair
- Temporary replacement equipment provision

Intelligent O&M Platform

- Real-time equipment condition monitoring
- AI-powered fault analysis and life prediction
- Life extension management and lean operations
- Power management and optimisation reporting

CONTACT & ENQUIRIES

Get in Touch

Multi-Group is ready to partner with you on your next power infrastructure project. Whether you need a single transformer, a turnkey substation, a utility-scale solar PV plant, or a full EPC project across the SADC region, our team is here to provide expert guidance and reliable local support.
